

AI AGENTS

Your CS team grew
40%.

Your churn still rose.

Here's the agentic fix.

Swipe →

THE PROBLEM

Why Traditional CS Breaks at Scale

- 60–80% of customers are in self-serve tiers no CSM covers
- Enterprise CSMs now cost \$250K+ fully loaded
- Renewal velocity demands sub-24hr signal detection
- Churn signals need to surface in days, not quarters

THE SOLUTION

What Agentic AI Adds to Your Stack

- Monitors 100% of accounts simultaneously
- Surfaces churn risk before customers go quiet
- Captures expansion signals the team would miss
- Turns reliable outcomes into priceable units

CASE STUDY

31% Churn Cut in 9 Months

- 1,800 customers, \$42M ARR, 19-person CS team
- Net revenue churn: 14.2% down to 9.8%
- Self-serve account churn: 22% down to 12%
- Gross retention climbed: 88% up to 93%

Manual vs Tool-Assisted vs Agentic

- Manual CS: top 30–40% ARR, quarterly QBRs only
- Tool-assisted: top 50–60%, weekly health scores
- Agentic CS: 100% coverage, continuous sub-24hr alerts
- Cost per account: \$9K vs \$3.4K vs \$700

PROFIT POOLS

Outcomes as Priceable Revenue Units

- Premium Success tier: 8–25% of base ACV
- \$4.2M ARR added in 9 months from one deployment
- 38% mid-market and enterprise adoption in 6 months
- First movers set the category pricing convention

IMPLEMENTATION

Sequence the Rollout Right

- Start with SMB and mid-market, not enterprise
- Enterprise relationship is the moat: protect it
- Build the data layer first: telemetry, support, billing
- Add intervention orchestration as the second layer

THE MATH

Pays Back in the First Quarter

- Year-one build and run cost: \$720K total
- Retained ARR from churn reduction: \$2.8M saved
- Net new ARR from Premium Success tier: \$4.2M
- Combined first-year return: \$6.3M on \$720K invested
