

FINTECH COMPLIANCE

Cut fraud noise by 64% with **AI agents.**

Swipe →

THE PROBLEM

Rule engines drown teams in noise.

- 47,000 alerts flagged in one quarter
- 46,300 cleared as false positives
- 96-98% false positive rate industry-wide
- Analysts spend 80% of time on noise

HOW AGENTS REASON

Context beats rule-matching.

- Reads alert + full customer history
- Produces a reasoning trace in 15 seconds
- Escalates only cases with genuine risk
- Audit trail built for compliance review

ARCHITECTURE

Layer agents over rules. **Don't replace them.**

- Agent layer sits on top of existing rule stack
- Rules catch obvious cases at scale
- Agents handle grey-zone reasoning
- Human escalation for edge cases

KYC AUTOMATION

Document review: days to minutes.

- Watchlist screening with behavioral context
- Risk scoring across full transaction history
- Reviewer queue shrinks by 80%+
- Payback inside 9 months at 200K+ MAU

LIVE DEPLOYMENT RESULTS

Real numbers. Real deployment.

- 64% reduction in false positives
- 12x improvement in analyst throughput
- 5-month timeline with compliance from week one
- 12-month timeline when governance is bolted on late

WHAT FAILS

Rip-and-replace deployments break.

- Tried to replace rule engine entirely
- Skipped compliance ownership at kickoff
- Bolted governance on in the final sprint
- Result: 12-month delays, failed audits

KEY LESSONS

Ship in 5 months, not 12.

- Embed compliance from week one
- Reviewer escalation as a first-class feature
- Treat the audit trail as the product
- Layer agents: don't replace the rules
