

MARTECH AI AGENTS

Personalization, attribution, and **campaign ops.**

Swipe →

THE MARTECH COMPLEXITY

50-tool stacks require agent coordination.

- Average enterprise Martech stack: 50-80 tools
- Data fragmented across CRM, CDP, ad platforms, and analytics
- Manual campaign ops cannot keep pace with signal volume
- Attribution models wrong by default at last-click

PERSONALIZATION AGENTS

Audience segmentation at signal speed.

- Dynamic segmentation from real-time behavioral data
- Content variant selection by predicted engagement score
- Cross-channel message sequencing without manual setup
- Personalization loop: outcome back to model continuously

CAMPAIGN OPS AUTOMATION

Campaign ops without the operational drag.

- Campaign setup from brief with pre-flight checklist
- Asset coordination across creative and media teams
- Launch sequencing automated with dependency tracking
- Performance alerts with recommended actions, not just data

ATTRIBUTION INTELLIGENCE

Model the full funnel, not the last click.

- Touchpoint sequence analysis across the full buyer journey
- Incrementality testing automated and continuous
- Budget reallocation recommendations from outcome data
- Attribution model updated weekly from closed-loop signals

DEPLOYMENT RESULTS

Outcomes from Martech deployments.

- 22-35% improvement in campaign conversion rates
- Attribution model accuracy up 28-40% vs last-click
- Campaign setup time cut 60% from agent-assisted briefs
- Marketing ops headcount held flat while volume doubled

INTEGRATION REQUIREMENTS

What agents need to work in Martech.

- CDP as the unified customer data layer
- Event stream with consistent taxonomy across tools
- Closed-loop conversion data with attribution timestamps
- API access to campaign management platforms

WHAT FAILS

Martech agent pitfalls to avoid.

- Personalization without brand safety guardrails
- Campaign automation that can't halt on compliance signal
- Attribution without incrementality testing misleads budget
- Agents that optimize for proxy metrics, not revenue
