

PROPERTY MANAGEMENT AI

Tenant ops and maintenance: **80% automated.**

Swipe →

THE OPS BURDEN

COOs are managing tickets, not strategy.

- Tenant requests average 4-8 hours for first response
- Maintenance coordination spans 3-5 disconnected tools
- Vendor scheduling involves 6+ phone calls per dispatch
- COO time split 70/30 admin vs portfolio strategy

TENANT REQUEST HANDLING

80%+ resolved without staff.

- Maintenance requests triaged and categorized instantly
- Routine requests dispatched to vendor without human touch
- Status updates sent to tenant automatically
- Human escalation only for policy exceptions

MAINTENANCE DISPATCH

Vendor coordination without the calls.

- Work order created from tenant request automatically
- Vendor assigned by skill, availability, and SLA
- Scheduling confirmed and sent to all parties
- Completion verified with photo and checklist upload

COMPLIANCE AND DOCUMENTATION

Every interaction logged and compliant.

- Habitability response time tracked against local law
- Communication logged for landlord-tenant dispute defense
- Inspection scheduling automated with required notice
- Repair history stored per unit for due diligence

DEPLOYMENT RESULTS

Outcomes from live deployments.

- 80%+ of tenant requests resolved without staff involvement
- Response time cut from 6 hours to under 3 minutes
- Maintenance dispatch cost reduced 35-45%
- COO time shifted from ops to portfolio growth

WHAT FAILS

Automation without escalation fails tenants.

- Agents that can't route emergencies to humans instantly
- Dispatch without vendor SLA tracking loses time windows
- No communication history creates liability exposure
- Automation that violates habitability notice requirements

IMPLEMENTATION PATH

Start simple. Scale what works.

- Start with maintenance triage and dispatch only
- Add tenant communication tracking in phase 2
- Add compliance documentation in phase 3
- Full resident lifecycle automation in phase 4
