

CUSTOMER SUCCESS

Your CS Team Grew 40%. Churn Grew Too.

AI agents fix the architecture. Outcomes become
the new pricing layer.

THE PROBLEM

Why Traditional CS Breaks at Scale

- 60-80% of customers live in tiers no CSM will ever touch
- Fully loaded CSM cost crossed \$250K in 2025
- Renewal cycles shortened: signals need days, not months
- Quiet churn: accounts go silent before they cancel

THE SHIFT

What Agentic AI Actually Does

- Reads telemetry across every account simultaneously
- Surfaces churn risk before the customer goes silent
- Captures expansion signals the CS team would miss
- Turns recovered outcomes into directly priceable revenue

REAL NUMBERS

31% Churn Reduction in 9 Months

- Net revenue churn: 14.2% dropped to 9.8%
- Gross retention climbed from 88% to 93%
- Self-serve churn: 22% cut down to 12%
- New Premium Success tier added \$4.2M ARR

THE COMPARISON

3 CS Models. One Clear Winner.

MANUAL CS

Top 30-40% by ARR only

\$3,200-\$9,000 per
account/yr

Quarterly churn signals

AGENTIC CS

**100% customer
coverage**

**\$300-\$700 per account/
yr**

Sub-24-hour alerts

NEW REVENUE

Outcomes Are the New Pricing Layer

- Seats price the right to use software
- Outcomes price the value the software produces
- Premium Success tiers land at 8-25% of base ACV
- 38% mid-market adoption within 6 months of launch

WHERE IT WINS

Expansion Signals You Would Have Missed

- 70-85% expansion signal capture vs 20-35% manual
- Self-serve tier: full coverage vs zero human reach
- Cost per account is 10x cheaper than named CSMs
- \$6.3M return on a \$720K first-year deployment

DEPLOYMENT

The Sequence That Works

- Start with SMB and mid-market: protect enterprise relationships
- Layer the agent over your existing data stack
- Introduce Premium Success tier at month 4
- Measure by net revenue churn, not health scores

READY TO START

Fix the Architecture. Reprice the Outcome.
