

PROPTECH AI AGENTS

What actually works: Leasing, listings, **tenant ops.**

Swipe →

THE PROPTech BURDEN

Admin kills licensed agents.

- Licensed agents spend 60%+ on admin tasks
- Tenant inquiry response averages 4-8 hours
- Maintenance coordination spreads across 3+ tools
- Listing updates require manual intervention

LEASING AUTOMATION

Qualify leads before human contact.

- AI pre-qualification screens 100% of inquiries
- Tour scheduling synced to calendar automatically
- Application status tracked without CSM touchpoints
- Lease renewals triggered by occupancy signals

LISTINGS INTELLIGENCE

Dynamic listings: **agents stop updating.**

- Pricing models update from market signal feeds
- Availability synced across all portals in real time
- Description variants A/B tested against CTR data
- High-value leads prioritized by engagement score

TENANT OPERATIONS

80% of requests resolved without staff.

- Maintenance dispatch routed and tracked by agent
- Vendor scheduling handled with SLA enforcement
- Tenant communication logged for compliance
- Escalation only when policy or judgment required

DEPLOYMENT RESULTS

Real outcomes from live deployments.

- 80%+ tenant requests resolved without staff involvement
- 4-hour average inquiry response compressed to under 2 min
- Licensed agent time shifted to closing and relationship work
- Payback inside 8 months for portfolios above 500 units

WHAT FAILS

Automation without escalation logic fails.

- Agents that can't escalate frustrate tenants
- Listing automation without pricing guardrails over-discounts
- Maintenance dispatch without vendor SLA tracking misses windows
- No human review loop for high-value lease decisions

ARCHITECTURE

The stack for multi-unit operators.

- CRM and PMS integration as the agent data layer
- Messaging agent for tenant-facing communication
- Operations agent for vendor and maintenance routing
- Analytics layer for portfolio-wide performance signals
