

CUSTOMER SUCCESS

Your CS team grew 40%. Churn still won.

The 2018 CS playbook is broken. AI agents are the
fix
and the new profit pool.

Swipe →

THE BREAK POINT

The model that got you here will not scale

- 60-80% of your customers live in self-serve tiers no CSM ever touches
- They generate 50-65% of net revenue churn. Quietly.
- A US-based CSM costs \$250K fully loaded. Books cannot grow.
- Renewal cycles shortened: churn signals must surface in days, not quarters

AGENTIC CS

Pattern recognition at machine scale

- Monitors 100% of accounts simultaneously, not just top 40%
- Surfaces churn risk before the customer goes silent
- Captures 70-85% of expansion signals vs 20-35% manually
- Routes each account to the right intervention automatically

LIVE DEPLOYMENT

Series C SaaS. 9 months. Real numbers.

- Net revenue churn: 14.2% dropped to 9.8%
- Gross retention climbed from 88% to 93%
- Self-serve churn cut from 22% to 12%, steepest gain
- 340 high-priority churn risks surfaced every month

THE MATH

\$720K in.
\$7M+ back. Year one.

- \$2.8M gross savings: retained ARR that would have churned
- \$4.2M net new ARR from the outcome-priced Premium tier
- Investment paid back in the first quarter of deployment
- 38% of mid-market adopted the new tier within 6 months

MODEL COMPARISON

Three CS models. One clear winner.

- Manual: covers 30-40% of base at \$3-9K per account per year
- Tool-assisted: 50-60% coverage, health scores but no interventions
- Agentic: 100% coverage at \$300-700 per account per year
- Only agentic CS makes outcome-based pricing structurally viable

PROFIT POOL

Seat pricing captures access. **Outcome pricing captures value.**

- Premium Success tiers priced at 8-25% of base ACV
- Retention guarantees become a directly priceable unit
- First-mover sets the pricing convention for their category
- Stacks on top of seat pricing. Does not replace it.

HOW TO SEQUENCE

Start SMB. Not enterprise.

- Enterprise: the relationship is the moat. Protect the human layer.
- SMB and mid-market: fully automatable, highest ROI first
- Data layer first: telemetry, support, billing all unified
- Custom build consistently outperforms horizontal CS platforms
