

CUSTOMER SUCCESS

**Your CS team grew.
Your retention didn't.
AI agents fix the math.**

Swipe →

THE PROBLEM

Scale breaks manual CS

- 60-80% of customers get zero human coverage
- Self-serve tiers drive most churn, silently
- CSMs can't read telemetry fast enough
- Quarterly reviews miss early warning signs

THE COST SHIFT

Coverage cost drops 10x

- Manual CS: \$3,200-\$9,000 per account per year
- Tool-assisted: \$1,400-\$3,400 per account per year
- Agentic CS: \$300-\$700 per account per year
- 100% coverage, not just the top 40%

HOW IT WORKS

Three signals, one agent

- Churn risk before customers go quiet
- Expansion signals the team would miss
- Sub-24-hour continuous monitoring
- Routes to the right human or playbook

INTERVENTION MODEL

Right action, right tier

- SMB: automated playbook runs instantly
- Mid-market: CSM ping with full context
- Enterprise: pre-built save plan delivered
- Agent routes, humans close

REAL RESULTS

What production data shows

- Net revenue churn cut from 14% to 9.8%
- Gross retention climbs from 88% to 93%
- Self-serve churn drops 10 percentage points
- 38% of mid-market adopts premium tier

NEW REVENUE

Outcomes become billable

- Seat pricing: right to use the software
- Outcome pricing: captures the value produced
- Premium tiers land at 8-25% of base ACV
- Agent reliability makes the pricing stick

HOW TO START

Sequence the rollout right

- Start with SMB and mid-market, not enterprise
- Build the data layer before the AI layer
- Prove the outcome, then price it
- Human moat stays on strategic accounts

NEXT STEP

Size your churn pickup.

We benchmark your retention metrics and map the deployment that pays for itself in the first quarter.
