ENTERPRISE AI AGENTS

Your AI Agent Pilot Will Die In Month Four.

Unless you build it as infrastructure, not a feature.

Swipe →

THE SHIFT

Agents Are Infrastructure Now.

- State machines and tool orchestration
- Evaluation harnesses required from day one
- SLAs, observability, and on-call rotations
- Systems engineering, not just prompting

PILOT KILLERS

Why 60% of Pilots Never Ship.

- Choosing too-autonomous workflows first
- No eval infrastructure on day one
- Treating LLM cost as a fixed line item
- No operating model when the vendor leaves

SEQUENCING

Start with the Boring Agent.

- 80% deterministic, 20% judgment
- Clear fallback and spot-check path
- Run 60 days, then scale the scope
- Build trust before building ambition

No Eval Means Flying Blind.

- 200+ representative test cases minimum
- Score: accuracy, tools, latency, cost
- CI gate blocks regressions above 3%
- Demo success is not production success

REAL NUMBERS

Run Cost Beats Build Cost in Year Two.

- First agent build: \$180K to \$850K
- Monthly run cost: \$4K to \$80K ongoing
- 3-year run cost is 3x the build cost
- Token efficiency is the deciding variable

VENDOR FILTER

One Filter Eliminates 80% of Vendors.

- Name 2 agents live for 12+ months
- Show a regression test from last week
- Only quote after paid 2-week scoping
- Deliver an operating model, not just a build

OPERATING MODEL

The Handoff Is Where Projects Quietly Die.

- Runbooks for 12 likely incident types
- On-call rotation trained before launch
- Eval review schedule with clear ownership
- Advisory support built into year one

CODISTE

CODISTE

Build a Real Production Agent. We Have Done It.

Senior engineers. Eval harness from week one.
Shipped in fintech, SaaS, RegTech, AdTech
across the US.
